Student Scholarship Recognition Day

Apply Online by March 15th

www.willamette.edu/cla/ssrd
WILLAMETTE UNIVERSITY’S
TENTH ANNUAL
STUDENT SCHOLARSHIP RECOGNITION DAY

Student Scholarship Recognition Day (SSRD) is held each spring to celebrate the exemplary scholarship and creativity of Willamette University students. It is a day for students to share the fruits of their research, to present musical, theatrical, and dance performances, and to display works of art to members of the faculty, family, friends, and fellow students. Regular classes are not held on SSRD as a way of honoring the extraordinary accomplishments of our students and demonstrating Willamette University’s institutional commitment to student scholarship.

Please join in celebrating the tenth anniversary of SSRD. This year for the first time, to mark this anniversary, SSRD will include a LUNCHEON CELEBRATION in Goudy Commons to showcase a sample of Willamette’s finest singers, dancers, and musicians. All are welcome!

Also new this year is the use of Ford Hall and an increase in two-person oral presentations. Lastly, students will be pleased to see the introduction of a new SSRD tradition: special class council sponsored events in the early evening.

The students whose work is presented at SSRD have been supported in various ways. Some have worked directly with members of the faculty as research assistants or on student-faculty collaborative projects. Others have designed and conducted their own research, often during summer or throughout their senior year for a senior thesis or capstone research project. Still others have created original works in fine and performing arts.

As you will see in this program, SSRD 2010 represents a rich array of thoughtful scholarship addressing longstanding philosophical debates and current social problems, environmental challenges and scientific quandaries. It also offers an exciting spectrum of creative works. We invite you to participate broadly and to share your ideas with the student scholars and artists.

Please join in celebrating the intellectual achievements, curiosity, and creative spirit of our extraordinary students.
All Day Activities ..................................................... 5

Junior Art Major’s Spring Review Exhibition
Art Building Gallery, Student Gallery
8:00 am - 4:00 pm

Senior Art Major’s Exhibition
Hallie Ford Museum of Art
10:00 am - 5:00 pm

Morning Activities ..................................................... 5

Session 1: Oral Presentations
Collins Science Center, Eaton Hall, Ford Hall, Hatfield Room,
Mark O. Hatfield Library, & Rogers Rehearsal Hall
9:30 – 11:30 am  Panels will break for 10 minutes at 10:10 am

Lunch Hour Activities ..................................................... 11

Willamette Musicians – Up Top, Willamette Dance Company, &
Willamette University, Chamber Jazz Ensemble I
Goudy Commons
11:45 am  – 12:45 pm

Abstracts ...............................................................25
(listed in alphabetical order by last name, as submitted)

Acknowledgements..................................................60
All Day Activities

8:00 am – 4:00 pm  
**Junior Art Major Spring Review Exhibition**  
*Art Building – Student Gallery*

Emily Cafaro, Janelle Hammerstrom, Kathryn Hendricks, Delora Hilleary, Emily Lewis, Kelli Maeshiro, Sarah Miller, Maxwell Stepan, Andrew Theis, and Jules Vogel

10:00 am – 5:00 pm  
**Senior Art Major’s Exhibition**  
*Hallie Ford Museum of Art*

Art History: Alisa Alexander, Susan Johnson, Sarah Liberatore, Paige Morton, Colleen O’Neil, and Christina Peaslee

Studio Art: Emily Franklin, Lacy Gillham, Anna Gorin, Korina Alexis Keaton, Trevor Leaf, Claire Lindsay-McGinn, Rachel Sabin, Coral Sorensen, Beth Tatlock, and Bryan Valera-Gengler

Morning Activities  
9:30 am - 11:30 pm

**Session 1: Oral Presentations**  
*Collins Science Center, Eaton Hall, Ford Hall, Rogers Rehearsal Hall, & Hatfield Room, Hatfield Library*

**Biomedicine Examined: Cross-cultural Perspectives**  
**Moderator: Jade Aguilar // Eaton 106**

- Drofyak, Nelya: Drofyak Family Model: Complexity of Mental Health Among Older USSR Immigrants
- Esser, Gabrielle: The American Dream Embodied in Biomedicine from Mariel to PCH: An Illness Narrative
- Dickey, Emily: Personal Perspectives on Biomedicine: an Exploration of Accessibility to Care, Personal Agency, and Attitudes Towards Treatment
College Colloquium Research
Moderator: Ellen Eisenberg // Ford 102

Hines, Joseph  
The British Reception to Alexis de Tocqueville
Hoffman, Claire  
Parts and Wholes: “Things in Themselves” and Unity within the Novels of Virginia Woolf
Jones, Stephanie  
Weighted Pebbling Numbers: A Battle of Wits Against an Evil Opponent
Niermeyer, Madison  
The Importance of Intimacy: The Rehetoric of FGC in Kajiado, Kenya
Wright, D’Arcy  
In Search of a Greener Revolution: The Origins of the Green Revolution and Sustainable Agricultures

Courtey, Crime, Chimeras and the Count: Explorations of Popular Figures in Classical Literature
Moderator: Gretchen Moon // Collins 205

Miller, Barratt  
“There Is Almost Nothing Here That Does Not Change”: The Impossible Illusion of Transformation in Robin McKinley’s Rose Daughter
Harrison, Lynsey  
The Undead and the Living God: How 19th Century Vampire Literature Reveals the Victorians’ Evolving Conceptions of the Nature of God
McCartan, Alison  
The Mirror Cracked from Side to Side: The Imaginary, the Symbolic, and Sir Gawain and the Green Knight as a Turning Point in Medieval Literature
Martin, Colleen  
Quite a Three Pipe Problem: Sherlock Holmes’ Motivation and Plot

Cultural Integration Within and Beyond Asia
Moderator: Xijuan Zhou // Ford 302

Baroza, Aurora; Rhodes, Emi; Li, Xun; Faricy, Morgan  
Internet Impact on Urban Chinese Youth’s Support for the CCP
Faricy, Morgan  
Betwixt and Between: China’s Efforts to Confront Global Warming in the 21st Century
Li, Xun  
Pills or Poke: A Comparison of Acupuncture and Zoloft on the Treatment of Depression
Rhodes, Emi; Baroza, Aurora; Li, Xun; Faricy, Morgan  
Exchange of Religion Between China and Japan
Experiencing Asia: Student Exporations and Discoveries  
**Moderator: Ron Loftus  // Collins 201**

- **Godwin, Caitlin**  Discovering Japanese History Through its Museums  
- **Lee, Judy**  A Journey Home  
- **McKay, Hillary**  Exploring the Concept of Global Citizenship  
- **Robinson, Chelsea**  Presentations of Emperor Hirohito in Japanese War Museums  
- **Valera-Gengler, Bryan**  Immersing in Tagalog Language Study  

Food and Agriculture in the 21st Century  
**Moderator: Kimberlee Chambers  // Eaton 307**

- **Dunne, Jonnie**  Effectiveness of Winter Cover Crop Treatments in Suppressing Weeds  
- **Dunne, Jonnie**  Are You Buying What They’re Selling? Food Retailers’ Perspectives on Local Food in the Willamette Valley  
- **Giombolini, Katlyn**  From Turf to Table: (re) Transitioning from Grass Seed Production to Edible Grain Production in the Willamette Valley  
- **Grauel, Katherine**  Ethics or Economics: Why is the Organic Sector in Mexico Growing?  
- **Schlegel, Annie**  Pesticide Use and Migrant and Seasonal Farmworkers in Oregon: An Examination of Health, Risk Perception and Agency  

Forest, Fish and Farm: Research at Willamette University’s Zena Forest  
**Moderator: Karen Arabas  // Collins 105**

- **DiNovi, Sara**  Environmental Education at Zena Forest  
- **Ninneman, Alexandra**  Fish Passage and Habitat Restoration: A Study of Fish Passage Barriers Along Spring Valley Creek  
- **Stonebraker, Peter**  Zena Forest Rainwater Reclamation and Sustainability  
- **Lugg, Mary**  Avian Biodiversity: Comparing Avian Richness and Diversity According to Stand Type at Willamette University’s Zena Forest  
- **Copes-Gerbitz, Kelsey**  Zena Forest: Past, Present, and Future
**SCHEDULE OF ACTIVITIES**

**Games, Gaming, and 3D Media**  
**Moderator: Jenny Orr // Ford 201**

- Collins, Wade: Practical Stereo Imaging -- Another Dimension of Sight
- Liebing, Richard; Hamar, Candace; Smith, Victoria; Wolfe, Heidi: Root-a-bega: A Simple Introduction to Combinatorial Game Theory
- Lomax, Dominique: Math and Popular Board Games
- Volz, Brett: From Point A to Point B: Comparing Pathfinding Algorithms for Use in Videogames

**Historical Analysis for Understanding Contemporary Challenges**  
**Moderator: Seth Cotlar // Collins 210**

- Ledford, Kelsey: From Local History to the Volstead Act: The Fight for Prohibition in Oregon
- Parker, Neal: Calvin, Locke, and the Environment
- Penrod, Calvin Matthew: Hitler’s Atlantic Wall and Its Importance in the Larger WWII Narrative
- Rathe, Caitlin: The Emergence of a High African-American to White Unemployment Ratio During the Great Depression
- Walsh, Timothy: John VI Cantacuzenus and the Fall of the Byzantine Empire

**History from the Bottom Up: Bodies Medieval and Modern**  
**Moderator: Wendy Petersen-Boring: Leslie Dunlap // Eaton 211**

- Walker, Catherine: Multiple Meanings in Medieval Bodies
- Weed, Hayley: “Lady Soul, You are so utterly formable to my nature”
- Wright, Robin: Gendered Explorations of Body, Self, and Sexuality in Medieval and Modern Texts
- Holdreith, Grace: Ascetic Asylum
Music, Textiles, & Vampire Stories: Doing African Cultural History
Moderator: Bianca Murillo // Ford 204

Harper, Hannah; Kwiatkowski, Carley; Olsen, Marie
Innovation and Authenticity: Textiles in Mali

Harper, Hannah; Kwiatkowski, Carley; Olsen, Marie
Speaking With Notes: Realizing “Angola” Through Music (post WWII-1975)

Harper, Hannah; Worthing, Sarah; Kwiatkowski, Carley; Olsen, Marie
Rumor, Gossip, and Blood: Vampires in Colonial Africa

Philosophy
Moderator: Ivan Welty // Eaton 412

Irving, Sean
Wittgenstein

Roos, Lyndsey
Three Aspects of Dasein’s Disclosedness in Heidegger’s Being and Time

Tirrell, Carrie
Justifying Self Respect

Zane, Megan
Examining the Gap: Evaluating the Dispute Between Bertrand Russell and P. F. Strawson

Moderator: Emily Drew // Hatfield Room, Hatfield Library

Alexander, Rebecca
Queerify Those Volunteers: Creating a Radical Queer Volunteer Training for Salem Rainbow Youth

Krow-Boniske, Rachel
Education as the Practice of Freedom”: An Exploration into Transformative Pedagogy and Anti-Bias Education

Parker, Jessica  Ted Bundy vs. Hannibal Lecter: An Exploration of Factual and Fictional Serial Murderers from the Mid-20th to Early-21st Centuries
Rising, Amy  The Propensity of Military Brats’ Future Military Enlistment
Tran, Thanh  Athletes and Alcohol Consumption

Surfing the Newest Wave: Willamette Filmmakers
Moderator: Aili Zheng // Ford 122

Polzin, Mathew; Willgohs, Patrick  Light Out: A 3D Animated Short
Schiller, Tanya  Los Kiltros de Valparaíso (The Street Dogs of Valparaíso): A Chilean Documentary
Wulzen, Mary; Warren, Jennifer  A Tale of Two Socks
Yamada, Stephen  Duck and Cover: A Short Film

The Art and History of Music
Moderator: Marva Duerksen // Rogers Rehearsal Hall

Brody, Ian  Brevity is the Soul of Wit: An Exploration into the Conception and Performance of Anton Webern’s Cello Sonata (1914)
Janssen, Kristine  Sonorous Sexualities: Implications of Gender Characterization in Opera
Leland, Hannah  “Platinum Spirals” Through Performance and Analysis
Southorn, Debbie  Teaching to a New Tune: Possibilities for Social Justice in Music Education
The Individual Writing from the Fringe of Culture
Moderator: Ken Nolley // Ford 304

Davidson, David
- Edward Abbey’s Middle Path: Spirituality, Individuality and Community in Desert Solitaire

Gallegos, Heather; Davidson, David; Eichner, Maureen; Tallent, Gabriel
- Queering Gender and Then Some: An Intersectional Look at Stone Butch Blues

Tallent, Gabriel
- The “Intriguing Little Slut”: Pleasure in Samuel Richardson’s Pamela

Tallent, Gabriel; Davidson, David; Gallegos, Heather
- The Sounds of Silence: Sonnets by Elizabeth Barrett Browning and Christina Rossetti

Lunch Hour Activities
11:45 am – 12:45 pm

Goudy Commons

Up Top – Women’s Acapella:
- Grace Komarek-Meyer, Debbie Southorn, Lauren Barnhart, Sara Quinn, Sydney Gabbard, Ellie Thomson, Kaeley Pruitt-Hamm, Ashley Ingersoll, and Christiana Zollner

Willamette Dance Company:
- Tessa Allen, Alex Ninneman, Leslie Schultz, Stina Thorburn, Madeline Yoste

Willamette University Chamber Jazz Ensemble I:
- directed by Julian Snow
- Adam Lozier, Paxton Gehling, John Snelgrove, Dan Daly, Robert Blodgett, and Joe Provencher

Early Afternoon Activities
1:00 – 1:45 pm

Session 2: Oral Presentations
Collins Science Center, Eaton Hall, Ford Hall, & Rogers Rehearsal Hall

Nature Walk, A Pleasant Stroll with a Campus Naturalist
Meet at south side of Waller Hall – The walk will be led by Hayley Serres
Special Panel of Presidential Scholars
**Moderator: Monique Bourque // Hatfield Room, Hatfield Library**

Weber, Jeffrey  Mathematics, Particle Accelerators, and Chemotherapeutics: An Experimental and Computational Analysis of Anti-Cancer Compound KP1019

**Ancient Studies**
**Moderator: Scott Pike // Eaton 307**

Henry, Jason  Examining the Role of Colluvial Processes and Slope Movement in the Distribution of Archaeological Materials.

Pryce, Whitney  Using X-Ray Fluorescence to Discriminate Between Unique Clay Sources in the Southern Abruzzo, Italy

**Antiviruses and Microbes: Software and Soil**
**Moderator: Andrew Duncan // Ford 304**

Block, Daniel  If You Can’t Stand the Heat, Stay Out of the Hot Spring

Harwood, David  Network Intrusion Detection at Willamette University

**Blurring Lines: Relationships Mediated by Cultural Identity in British Fiction**
**Moderator: Gretchen Moon // Ford 102**

Donaldson, Emily; Scott, Kelsey  Navigating the Spectrum: Cultural Hybridity, its Manifestations, and its Effects on Relationships in the Contemporary Literature of London’s Bangladeshi Diaspora

Scott, Kelsey; Donaldson, Emily  The Secret Shall Be Told: Failures of Friendships in E.M. Forster’s A Passage to India and Where Angels Fear to Tread

**Camassia (camas lilies): Genetic and Ecological Approaches**
**Moderator: Susan Kephart // Ford 201**

Vietmeier, Hannah  Unraveling the Pollination System of a Willamette Valley Wildflower: Pollen Limitation and Pollinator Effectiveness in Camassia

Leng, Ju-Fang  Detecting Gene Flow Beeen Species of Camassia Using Microsatellites
Corporate Influences on American Life  
**Moderator: Don Negri // Collins 205**

- **Clanton, Benjamin**  
Hands-On Fun(ding): Are Children’s Museums Open for Bu$ine$$?  

- **Dougal, Michael**  
Is Corporate PAC Money Legalized Bribery?: A Model of Corporate PAC Resource Allocation and its Impact on Roll Call Voting in Congress

Education, Learning, & Social Justice  
**Moderator: Meredy Goldberg-Edelson // Collins 408**

- **Menefee-Libey, Samuel**  
Higher Education, Democracy and the Legitimation of Power  

- **Reid, David**  
Austin Blvd: A Comparative History of Education on Chicago’s Westside

Examining Efficacy: Homeopathic and Chinese Medicine  
**Moderator: Miho Fujiwara // Eaton 211**

- **Barlow, Caprielle**  
Traditional Medicine in Modern Context: Determining Bufadienolide Content of Traditional Chinese Medicines  

- **Gilmore, Shonnessy; Blahnik, Gabriele**  
A Comparison of Homeopathic Remedies to Antibiotics for Microbial Control

Explorations in Music  
**Moderator: Michael Nord // Rogers Rehearsal Hall**

- **Bullard, Daniel**  
The Art of Vinyl: Analog Music Production in a Digital Age  

- **Taylor, Philip**  
Metamorphosis: A Composer’s Writing Process

Friendship and Film in the College Experience

Conducting Session: Up Above My Head: A Choral Experience
Moderator: Wallace Long // Hudson Concert Hall, Rogers Music Center
Willamette University Chamber Choir, Conducted by Kathryn Martin

Martin, Kathryn The final result of her conducting internship, Katie Martin will conduct this spiritual titled piece “Up Above My Head”, arranged by Randal Swiggum, performed by the Willamette University Chamber Choir

Music Recitals:
Moderator: Jean-David Coen // Hudson Concert Hall, Rogers Music Center

Phil Taylor – piano
Even Engelstad – piano
Andrea Weiss – harp
Emily Mcneilly – voice
Hannah Leland – violin
Emily Johnson – oboe
Evening Activities

Class Council Social Events
After a full day of scholarship, relax and unwind with these social events presented by the Willamette University Class Councils

7:00 – 9:00 pm  
**Juniors and Seniors // Cat Cavern**

7:30 – 9:30 pm  
**Freshmen and Sophomores // Montag Den**

Literary Readings
End your day with style. Enjoy the creative stylings of Willamette’s Literary magazine – The Chrysalis.

10:00 – 11:30 pm  
**The Chrysalis Literary Readings**  
**Chief Editor: Madison Niermeyer // The Bistro, 1st Floor, UC**

Authors from the 2009 edition of The Chrysalis will read their poetry and short stories. Copies of The Chrysalis will be distributed for free at the event. Please come take a magazine, hear creative work, and see a slice of what kind of talent the university has to offer.
**Alexander, Alisa; Johnson, Susan**

**An Unlikely Art Historical Pair: Nicolas Poussin and Henry Darger in Conversation**

This joint presentation about two seemingly dissimilar artists seeks to examine the flexibility of art historical discourse. Nicolas Poussin and Henry Darger represent artists on opposite sides of art history's canon: Poussin, the high-minded seventeenth-century Classical French artist versus Darger, the reclusive if not slightly mad Outsider artist of the twentieth century. In this discussion of unexpectedly similar themes and motifs in their work, namely, arcadia, weather, and outsiders, we seek to highlight art history's capacity to push the boundaries of traditional methodologies. An experiment in the “New Art History,” this presentation is meant to flex the critical muscles of the discipline.

Ford 102, Session 4

**Henry Darger as a Case Study for Outsider Art: Canonicity, Aesthetics, and Context**

What does it mean to be labeled an Outsider artist? How can art history discuss aberrant artists who lie outside of the discourse, who seem impossible to assimilate because of their strangeness? In a discussion of the twentieth century Chicago artist Henry Joseph Darger, this essay provides a case study for the field of Outsider art, and deconstructs ideas of canonicity, aesthetics, and context. By using traditional art historical frameworks to discuss an artist who lies outside the conventional model of art history, this essay seeks to prove that artists such as Henry Darger can not only be critically examined by the discipline, but are embraced as well.

**Gendered Representations and Struggles**

Hatfield Room, Hatfield Library, Session 4

**Drs. Marie D’Equi and Alan Hart: Case Studies in Early-Twentieth Century “Female Sexual Inversion”**

Drs. Equi and Hart both lived and worked as medical doctors in Portland, Oregon during the first decades of the last century. Using tools of historiography and archival research, this project contextualizes their separate, but strikingly similar, lives. This piece of intersectional social history problematizes the ways in which current literature on sexual inverts, passing women, and female husbands has yet to comprehensively explain the experience of middle-class female professionals who exercised their masculinity in the public sphere of the Pacific Northwest.

Collins 205, Session 4

**The Impact of Human Rights Movements on the Construction of Democracy: Las Abuelas de Plaza de Mayo in Argentina**

During the cold war era, Argentina was ruled by an authoritarian regime that was responsible for the torture, disappearance, and assassination of thousands. In the midst of terror, human rights groups emerged. Equating democracy with social justice, these groups took over the streets and plazas of the country in an effort to hold public officials accountable for committing atrocities, enforcing unjust laws, and violating basic human rights. They publicized what the authoritarian government did in secret and helped force them from power. Las Abuelas demonstrated that advocacy at a grassroots level can influence national reform and shape domestic and international law.

Environmental Determinants to Health and Reproduction
Ford 302, Session 3

**Transitioning to Independence: The Creation of a Resource Guide for the Parents of High-Functioning Autistic Adults**

The purpose of this project was to create an accessible, comprehensive resource guide to help parents transition their autistic adult children to adulthood and independent living. Many adults with autism desire independence but struggle to build the support systems they need for success. Parents can help their adult child build this support system. Unfortunately, very little resources are available on the treatment of autism in adults, and even less is written regarding how parents can be involved. This project aims to provide parents with guidance for addressing their concerns and helping their child achieve successful independent living.

Eaton 211, Session 4

**“Dangerous Dogs”: The Fiction Behind France’s Breed-specific Legislation**

This project examines breed-specific dog legislation in France and details why it is both impractical and ineffective. Certain stigmatized breeds, such as Pit bulls and Rottweilers, are targeted as ‘dangerous dogs’ based on poorly completed studies and faulty statistics. Very few studies have been done to justify the French government’s claim that certain breeds are more prone to aggression than others, and we will look at several studies that show otherwise. Rather than reducing the number of dog attacks, the current legislation creates unjustified fear of these breeds and fails to address the true problem – the owners.

Collins 205, Session 4

**Applications of Environmental History on Bolivia’s Coca Trade**

An important contemporary policy issue in South America is the effectiveness of coca eradication programs, especially efforts led by the United States and the International Monetary Fund. I examined a broad range of field studies conducted in Bolivia to assess the effectiveness of eradication programs. Findings suggest that despite early gains, the effectiveness of coca eradication efforts over the last 30 years has been compromised by the ability of coca growers to adapt to new policies. As a result, drastic changes in the paradigm for coca eradication may be necessary, if long-term gains are to be achieved.

Barlow, Caprielle
Examining Efficacy: Homeopathic and Chinese Medicine
Eaton 211, Session 2

**Traditional Medicine in Modern Context: Determining Bufadienolide Content of Traditional Chinese Medicines**

Pharmaceuticals in the United States are products of biomedicine, in which evidence for efficacy, toxicity, and quality control is evaluated via the scientific method. In contrast, traditional medicine systems typically involve trial-and-error use of indigenous natural substances over hundreds of years; in traditional systems, evaluation is historical and formulation is personal. In the United States, traditional medicines from foreign cultures may become mass produced and widely distributed. Additionally, these formulations are generally classified as “dietary supplements”, which are not subject to pharmaceutical testing and regulation. My research determines the levels of three bufadienolides (potent cardioactive steroids) in US-available Traditional Chinese Medicines, in order to gain insight about quality control, efficacy, and toxicity of traditional medicine in a non-traditional context.

One of Oregon’s Newest Invaders: The Eurasian Collared Dove

This project outlines the rapid expansion of the Eurasian Collared Dove across the globe, North America, and Oregon. In particular, it focuses on the effects of the bird on the economy and ecology of the state, and what can be done about the Eurasian Collared Dove and other invasive species.

Bennett, Jeffrey
Investigating Urban Water Issues in Salem, Oregon Session 4, Eaton 412

Urban Water Management in the Battle Creek Water-Shed

Urban stormwater flooding and water quality issues pose increasing problems affecting property owners, disrupting habitats, and increasing local management costs. Increased development of urban areas adds to the total volume of water and pollutants contributed to urban stormwater systems. Impervious areas from these developments provide for greater runoff and pollutants reaching the stormwater system during storm events. This study identifies ways to reduce flooding and increase water quality within the urban area located in the Battle Creek water-shed using four techniques: (1) increased sinuosity, (2) riparian restoration, (3) greater shade coverage, and (4) urban green zones.

Block, Daniel
Antiviruses and Microbes: Software and Soil Ford 304, Session 2

If You Can’t Stand the Heat, Stay Out of the Hot Spring

Microbes thrive in virtually every extreme environment on the planet. Each microbe has preferred growth conditions, called cardinal points, of minimum, optimum, and maximum for each environmental parameter. I investigated the optimal temperature requirements and defined the cardinal points of microbes found in soil from local compost and a California hot spring. Soil samples were diluted and incubated at medium (37°C/98°F) and high (50°C/122°F) temperatures. Twenty-four colonies were isolated, subcultured, and identified using culture-dependent biochemical and microscopic methods. The cultures were also incubated at low (5°C/41°F) and very high (70°C/158°F) temperatures to establish thermal tolerances. Most cultures produced capsules and were aerobic, with about half producing spores, and evenly split between Gram negative and positive. Six cultures were eurythermic, exhibiting a wide range of temperature tolerances.

Can Virtue Make Us Happy? The Art of Living and Morality Ford 204, Session 3

Hoffe

Is happiness found through an external focus on accomplishing goals in the material world? Or is happiness fashioned through an internal focus on performing one’s duty according to the moral standards of one’s community (religious or secular)? Might happiness (eudaimonia) consist in taking personal responsibility for one’s creative capacity to accomplish things that nature cannot
accomplish on its own? Might viewing virtue in terms of the origins of one's creativity rather than the external consequences of one's actions lead to an understanding of virtue that allows us to be human and happy?

The Last Act: Images from Nairobi's Matatus

This project reflects various images from the matatu system, the informal mode of public transport serving the city of Nairobi, Kenya. These reflections take the form of poems incorporating both physical moments in time and issues within Kenyan society, including development, public health, religion, and history. They capture various perspectives and places within both the city and the matatu system. This presentation will provide a brief introduction to the history of the matatu system in Nairobi and its cultural significance in Kenyan society. The presentation will then consider and discuss several poems written about various aspects of Nairobi's matatus in November 2009.

Molecular Approaches to Ecology
Collins 105, Session 3
Expansion and Decline of Southern California Populations of Yucca Brevifolia (Agavaceae)

Global climate change is expected to cause range changes and local extinctions, especially in species that are unable to migrate or adapt. Joshua trees (Yucca brevifolia) are at great risk of local extinctions; this is of concern because they are an integral part of the Mojave community. We studied nine sites in southern California with varying elevation and rainfall. Using population genetic data, we inferred which populations
have already begun to decline, which have remained stable, and which are expanding. By comparing these results to environmental data it will be possible to make more accurate forecasts of Joshua tree survival.

Ford 204, Session 2
Post-Soviet Developments in Latvia

Since its independence from the Soviet Union in 1991, Latvia has made significant progress toward democratic consolidation, but the country has also been hit especially hard by the current global economic crisis, suffered a collapse of its government in January 2009, and has struggled to integrate national minorities into its political and educational system. This presentation will examine Latvia’s post-Soviet trajectory in terms of its political, economic and social developments, offering an assessment for the future chances of democratic consolidation, economic prosperity and liberalization, and social integration.

Dahlberg, Brett
Nationalisms Examined
Ford 301, Session 5
Divergent Democratic Development in Latvia and Belarus

Despite strikingly similar situations at the moment of independence, Latvia and Belarus have taken markedly different democratic paths since their transition from Soviet republics to independent states. Democracy has solidified in Latvia, while President Lukashenka has consolidated Belarusian political power in the executive branch. I argue that this divergence is due to the countries’ discrepant susceptibility to international pressure. Because of its historically shallow and incoherent nationalist movement, Belarus was highly likely to be swayed away from a democratic path by international forces, while Latvia’s comparatively well developed and historically rooted nationalism made it more likely to hold a steady course.

The Individual Writing from the Fringe of Culture
Ford 304, Session 1
Edward Abbey’s Middle Path: Spirituality, Individuality and Community in Desert Solitaire

While Edward Abbey is typically thought of as a “nature writer,” this presentation argues that his body of literature is best understood as a discussion of the nature of human community. I find that the famously curmudgeonly author believes in a perfect and idealized sort of community that is almost spiritual in nature: a blurring of the concepts of “individual” and “community.” Abbey, however, fails to reach his goal, and I argue that Desert Solitaire is the story of his attempts to move beyond his own individualist tendencies to attain perfect community.
Dickey, Emily  
Biomedicine Examined: Cross-cultural Perspectives  
Eaton 106, Session 1  

**Personal Perspectives on Biomedicine: an Exploration of Accessibility to Care, Personal Agency, and Attitudes Towards Treatment**

This project explores the spread of Western-based biomedicine into non-Western regions of the world through the use of the ethnographic interview process. By analyzing one elderly Chilean woman’s experience with a pacemaker installation surgery the project will address issues such as patient advocacy, the efficacy of various medical systems, the economic and political grounding of health care in socialist versus capitalist countries, and how individuals interpret and internalize their own medical histories. The project provides an analysis of the positives and negatives of biomedicine on a structural level through the lens of the patient’s perspective.

Food and Agriculture in the 21st Century  
Eaton 307, Session 1  

**Effectiveness of Winter Cover Crop Treatments in Suppressing Weeds**

Agroecology is the application of ecology to the improvement of agricultural productivity. This involves the use of organisms and relationships in place of chemical inputs and machinery. One example is the use of winter cover crops in order to reduce weed pressure. I measured weed pressure in cover crop trials to determine which treatment best suppresses weeds. Preliminary results indicate that a mixture of rye & vetch allow fewer weeds to grow than vetch or fallow ground. This may be used with studies conducted in parallel to determine the most appropriate cover crop treatment for a given farm.

Queering Gender and Then Some: An Intersectional Look at Stone Butch Blues

This presentation will examine how intersectionality theory relates to Judith Butler’s gender performativity theory in the novel Stone Butch Blues by Leslie Feinberg. Jess defines her own existence with an essentialist point of view. However as she struggles with how to define her gender identity within the confines of the strict binary system (man or woman), other aspects of her being, including sexuality, class and race influence how she goes about performing her gender, proving to remove her experiences and own identity away from the essentialist perspective.

Geck, Amanda L.
Gendered Representations and Struggles Hatfield Room, Hatfield Library, Session 4
Differences in Couple Representation Between Men’s and Women’s Magazines

This study was a content analysis on 10 mainstream men’s and 10 mainstream women’s magazines. Any mention of a couple within an article, advertisement, or image was coded for the tone towards being a couple and what the genders of the people within the couple were. A tally of how many mentions of couples and of birth control was also taken. It was hypothesized that there would be more mentions of couples, that these representations would be more positive, and that there would be more mentions of birth control within the women’s magazines as opposed to the men’s magazines.
infections. This constitutes a threat to public health. Two homeopathic agents, Tea Tree Oil and Oil of Oregano, were compared to the inhibitory effects of known antibiotics. Tea Tree Oil and four major components were tested on Staphylococcus aureus and Staphylococcus epidermidis, from both laboratory stocks and natural sources. Oil of Oregano and two major components were tested on S.aureus, S.epidermidis, E.coli, and Enterococcus faecalis from laboratory stocks. Tea Tree Oil showed comparable results to antibiotic treatments, and results from Oil of Oregano indicated stronger inhibition than all antibiotics tested. As antibiotic resistance becomes more prevalent, studies should be done to identify alternative therapies.

Barack and the Birds: A Study of Human Face Recognition by Crows

Crows have long been known as one of the most intelligent groups of birds. Anecdotal evidence has historically pointed to the possibility that crows can recognize individual human faces, and learn who is trustworthy and who to avoid. However, only recently has any research been conducted to test these claims. Work done at Willamette in the last year has tested whether American crows (Corvus brachyrhynchos) can recognize the faces of “friendly” individuals. To establish us as “friendly” to the crows, we wore masks of Barack Obama and fed crows peanuts. After an acclimatization period, we hypothesized that if given a choice, crows would preferentially feed from the person wearing the familiar, “friendly” Obama mask, instead of a neutral face. Our results help show that crows are capable of recognizing benevolent individuals from other species, and further establish the crows among the ranks of the planet’s most intelligent species.

Music, Textiles, & Vampire Stories: Doing African Cultural History
Ford 204, Session 1

Speaking With Notes: Realizing “Angola” Through Music (post WWII-1975)

This presentation will use Marissa J. Moorman’s monologue, “Intonations: A Social History of Music and Nation in Luanda, Angola, from 1945 to recent times”, as a foundation to illustrate the ways in which music – as a form of cultural expression – was not merely derivative of, but productive of political imagination for Angolan colonial subjects. An analysis of Moorman’s monologue will serve to recover the hegemonic historical narrative of Angola by drawing on the voices, lyrics, and melodies of urban Angolan colonial subjects as the primary lens through which to view Angola’s history.

Harper, Hannah; Worthing, Sarah; Kwiatkowski, Carley; Olsen, Marie
Music, Textiles, & Vampire Stories: Doing African Cultural History
Ford 204, Session 1

Rumor, Gossip, and Blood: Vampires in Colonial Africa

Throughout Kenya, the Congo, Uganda, and Northern Rhodesia (known as Zaire today), vampire stories were told and retold as forms of rumor and gossip throughout the first half of the twentieth century. However, unlike western depictions of vampires as fanciful myth, vampire
stories in an African context offer profound insight into the colonial history of the region. Vampire stories serve as a means in which Africans discussed, debated, theorized, and explained social and economic changes that were instigated by colonial advent. Utilizing rumors of vampires as legitimate historical sources, we can reconstruct African perspective on changing gender roles, the influence of wage laborer, and response to colonial control and extraction mechanisms.

The Social Construction of Sustainability and Time
Collins 201, Session 2
Time Famine: From Portland to Paris, The Causes and Consequences of The Way We Work

The ways we work are changing. So profound are the issues of increasing working hours and decreasing work/life separation, among many others, that businesses, governments, individuals, and popular movements are responding in powerful ways. So as a case study of how these issues play out cross-culturally, I went to work in the kitchen of a small restaurant in rural eastern France. This presentation will look specifically at how the workers there were able to live out their passions in their work, as well as what the time trade-offs they make every day mean for their lives at large.

The Undead and the Living God: How 19th Century Vampire Literature Reveals the Victorians’ Evolving Conceptions of the Nature of God

An investigation into how 19th century vampire literature reveals the evolving religious beliefs of 19th century Britain. This presentation will examine Polidori’s “The Vampyre,” Le Fanu’s “Carmilla,” Stevenson’s “Olalla,” and Stoker’s Dracula in terms of the underlying religious beliefs revealed by how vampires are depicted in each story. _i_ek’s concept of belief before belief will also be used to understand how practice and belief interact in these texts. Using these explorations, it will then be possible to draw conclusions about how and why vampire fiction has experienced windfalls in the 19th and now the late 20th and early 21st centuries.

Network Intrusion Detection at Willamette University

The purpose of this project is to set up intrusion detection software on Willamette’s network. As the importance of computer security has grown in recent years, so has the importance of detecting possible intrusions into computers, often combined with other software to create programs such as antivirus or firewalls, but just as often standing on their own. The project focuses on adding another layer of defense to Willamette’s network, and creating documentation for the administration and maintenance of the intrusion detection system. General background, procedures, and results will be discussed.

Scanning Brains and Reading Minds: Decoding Vision Using Neuroimaging

This study made use of two common neuroimaging techniques to read and decode simple human thoughts. Using Functional Magnetic Resonance Imaging (fMRI), Electroencephalography (EEG), and Event-Related Brain Potentials (ERP), the purpose of the study was to successfully predict whether a participant was looking at dot patterns moving to the right or to the left based solely on recorded neural response patterns. It was concluded that fMRI is effective in decoding and predicting motion perception, while EEG/ERP technology requires further methodological examination. Results and implications will be discussed, including commentary on mind-reading through brain scans.
This study examines the role that dynamic slopes play in the post-depositional transport of archaeological material within a landscape. Utilizing data on colluvium sediment package depth and surface scatter location collected during archaeological investigations in the Sangro Valley, Abruzzo, Italy, a model depicting the general characteristics of slope movement in the valley is developed. This model is used to predict the location of cultural activity areas within the context of the valley based on the current position of archaeological surface scatters. The development and archaeological application of this model will be discussed.

Revelations on Serenity

This project is an exploration concerning the personal freshman year experience at Willamette University through photography. The project came from a personal desire to document the experience in an artistic manner. The video is divided into two sections. The first documents, in chronological order, the experience while the second is a more abstract artistic expression using photography. The video is supposed to represent a singular narrative on the experience which is why the video is in monochrome. In the second part of the video I wanted to explore the notion of the “self” and see how the concept relates to ourselves and how we interpret the world around us. The main theme running throughout the video is the concept of serenity.

A Genetic Screen to Identify Genes Required for Axonal Transport

Neurons use a microtubule-based transport system to bidirectionally transport proteins, vesicles, and organelles between the cell body and the synaptic terminal through the axon in a process called ‘axonal transport’. Disruption of axonal transport is thought to result in a number of neurodegenerative disorders in humans. We performed a genetic screen in the fruit fly Drosophila melanogaster to identify genes required for axonal transport. We have mapped twelve mutations from this screen to different loci on the third chromosome through complementation analysis against Drosophila with defined chromosomal deficiencies. Our analysis thus far has identified a seven candidate genes within these loci.

An Animal’s Life
Eaton 211, Session 4
Grizzly Bears and the Ecology of Roads in Northern British Columbia

Grizzly bears, along with other large predators, often lose habitat as humans encroach on their ranges. Scientists now know that animals such as the grizzly can not only act as keystone species but also be strong indicators of ecosystem health. We sought to evaluate the initial affects of human encroachment on frontier wilderness by studying Ursus arctos horribilis along roads in the Muskwa Kechika Management Area of British Columbia. The MKMA was chosen as the study area because of its high habitat quality and its potential for development and resource extraction. We initially observed grizzly activity along roads within the MKMA by conducting 1 km long, line transects. We additionally traveled the entire length of each transected road. This data was supplemented with information gathered from local government employees and
land managers. Our results show that the grizzly bear does use the roads for foraging as well as for corridors. Although there is some human-bear conflict, the resulting mortalities are not high enough to put the grizzly population at risk.

Parts and Wholes: “Things in Themselves” and Unity within the Novels of Virginia Woolf

In this project, the modernist aesthetic ideals of “things in themselves” and “significant form” are used as ways to conceive of Virginia Woolf’s unconventional portrayal of relationships in the novels Mrs. Dalloway, To the Lighthouse and The Waves. It discusses the tensions in the way Woolf conveys separation both as a way to preserve one’s self-integrity, necessitated by the characters’ inability to see one another “in themselves,” and as something that does harm by obscuring the presence of underlying unity that connects Woolf’s characters into all-encompassing wholes. It attempts to resolve this tension by relating the nuances of the relationships in Woolf’s novels to the aesthetics of visual art, in which distinct “lines and colors,” or her characters, unite to create “significant form,” or, in this case, unified wholes.

Obesity Induces Cardiac Arrhythmias: Role of Cardiac Sympathetic Nerves

Obesity is linked to an increased incidence of cardiac arrhythmias. However, the mechanism by which this occurs is unknown. This project tested the hypothesis that increased sympathetic innervation—resulting from elevated cytokine levels due to obesity-induced systemic inflammation—was responsible for the increased incidence of cardiac arrhythmias. Using a diet-induced model of obesity in rats, it was determined that obese rats were more likely to develop arrhythmias than lean rats. However, immunocytochemistry and RT-PCR indicate that obese rats do not have increased innervation. Therefore, heightened sympathetic innervation is not responsible for the higher incidence of cardiac arrhythmias in obese individuals.

Nicolas Poussin and “Ut Pictura Poesis”: Transcending Classical Landscape

A traditional reading of the seventeenth-century French painter Nicolas Poussin designates him as a History Painter—acclaimed for his monumental and classicizing figure-based works. However, a consideration of Poussin's many landscapes demonstrates that throughout the course of his career, his paintings reveal an increasing interest in scenes in which human-based subject matter is gradually made secondary to landscape itself. In his late works, Poussin uses history painting as a vehicle to depict nature as a primary subject. With these works, Poussin transcends the acknowledged genre of classical landscape—a tradition first established by Annibale Carracci— by use of his personal interpretations of nature in accordance with “ut pictura poesis”—“as is painting so is poetry.”

Synthesis of Biopolymers with Mutable Physical Characteristics

Biocompatible polymers have promising bioassimility and degradation properties. Previous coupling between two monomers (such as A and B) leads to random sequence polymers (e.g. ABBAABBBAB), which have variable physical properties along their length. Research performed this summer developed a technique to build polymers with specific sequences (e.g. ABABABAB), in which physical properties are uniform throughout the polymer. Further work to incorporate cysteine, an amino acid with a reactive side-chain, will increase the utility of these polymers for biomedical approaches.

Personality as a Moderating Variable in Coping Styles: Contextualizing “Successful” Coping Among Survivors of Sexual Assault and Domestic Violence

Past research has explored personality traits as predictive factors of coping with general and task-induced stress. Personality traits, however, have not been explored as predictive factors of coping with the trauma associated with gendered violence. In the present study, 10 clients at a women's crisis service participated. Surveys consisted of the Myers-Briggs Type Indicator, the revised Ways of Coping Checklist. Results indicated that extroverts, sensors and thinkers were found to use engagement coping strategies and introverts, intuitors and feelers were found to use disengagement coping strategies. It is suggested that the present study be replicated with a larger sample size.

The Scripture of Solitude: Gabriel García Márquez’s “100 Years of Solitude” and the Bible

This project posits Gabriel García Márquez’s “100 Years of Solitude” as a reinterpretation of the Judeo-Christian Bible in a distinctly Latin American paradigm. “100 Years of Solitude” functions as the narrative of a nation told through the lens of a particular family’s story; similarly, the Bible frames the story of the nation of Israel as the history of the descendents of the patriarchs. Combining direct and indirect allusions and parallels to the Bible with regional history and literary traditions, the novel creates a uniquely Colombian epic – a treatise of isolation in “the land that no one had promised them.”

Computational Modeling of a Coordination Chemical Model of Pyrite

Early earth (pre-biotic) chemistry is important to understanding the origin of life. Recent discovery of reduced iron-sulfur surfaces provides evidence for the role of iron-sulfur systems in the conversion of abundant pre-biotic molecules into simple organic molecules. Because recreating early earth conditions in the laboratory is challenging, the use of computational chemistry can assist in understanding the pathways toward the formation of the building blocks of life. Using molecular graphing tools, a computational model was built to recreate the pyrite surface used in experimentation. The findings present a promising new approach for generating molecular computational models for periodic iron-sulfur surfaces.

Collins 201, Session 5
“To Hell or Connacht”: The Paradox of Rebellion in Paradise Lost

This paper examines the way in which Milton’s use of religious merit as a justification for legitimate rebellion in Paradise Lost reflects a paradoxical belief about rebellion in seventeenth-century England. Through Alan Sinfield’s Cultural Materialist theory of ideological faultlines, Nicholas Canny’s postcolonialist analysis of English imperialism in seventeenth-century Ireland, and a new historicist reading of Milton’s political writings on rebellion, I explore the relationship between Milton’s characterization of Christ, Satan, and Eve in Paradise Lost and seemingly contradictory understandings of merit and rebellion in the English Civil War and mid-century Irish uprisings.

“Platinum Spirals” Through Performance and Analysis

Commissioned by the National Endowment for the Arts and dedicated to the memory of her father, a geologist, Joan Tower’s “Platinum Spirals” was written for solo violin in 1976. Tower says of her own work: “Platinum is a mineral whose internal properties reveal a very malleable and flexible set of characteristics. It is said that an ounce of platinum can be stretched into a mile.” Tower realizes the concept of stretching through rhythm, scale patterns, and various string techniques. This presentation will explore these compositional methods and will conclude with a complete performance of the work.

Leng, Ju-Fang
Camassia (camas lilies): Genetic and Ecological Approaches
Ford 201, Session 2
Detecting Gene Flow Between Species of Camassia Using Microsatellites

Gene flow is the transfer of alleles between populations of organisms. While organisms typically reproduce within their own species, occasionally hybridization between different species occurs. Hybrid offspring may display
traits from both parents as well as novel traits, characteristics created by a specific genetic change. Natural hybridization is evident in Camassia, a genus of perennial flowering bulbs important in preserving biodiversity in oak savanna and wetland habitats. To understand gene flow and hybridization I used genetic markers called microsatellites to detect specific alleles within the DNA of Camassia. Indication of variation has been found in two primers tested thus far.

Ford 302, Session 3

Heavy Metal Pollution, Oxidative Stress, and Autism

Prevalence rates of Autism Spectrum Disorders (ASDs) have drastically increased in recent decades. This project argues for a combined genetic-environmental cause for this increase. Literatures on ASD rates in areas of high pollution, biological evidence of heavy metal toxicity, and the presence of oxidative stress and decreased antioxidant activities in individuals with ASDs, and specifically autism, collaborate to provide support for a heavy metal-induced oxidative stress model of the disorder. This paper provides evidence for the hypothesis that fetal or infantile exposure to heavy metal containing pollution by individuals with biologically inhibited antioxidant functions results in the development of autism.

Root-a-bega: A Simple Introduction to Combinatorial Game Theory

Earlier in the year, a group of Willamette freshmen completed a colloquium called, “What’s in a Game?” which explored the basics of combinatorial game theory. Their final project was to create a new game, one which had never been played or studied before, and analyze it from a technical and mathematical perspective. This presentation is a summary of their work, and will introduce the audience to basic combinatorial game theory, and then to Root-a-bega, the student’s new game. Audiences will learn a different way to think about simple games, and some easy strategies for learning new ones quickly. They will also learn how to find “winning strategies” for some games they may be already familiar with. Finally, the audience will be shown how these strategies and ideas are applied to a new game when they are introduced to Root-a-bega. Audience participation will be encouraged!

Nervous: Researching the Brain & Neural Communication
Collins 105, Session 5
Investigating the Function of Stathmin in Axonal Transport

In order for a nerve cell to function properly, proteins and chemical messages produced in the cell body must be constantly transported to the synapse. The neuron employs motor proteins to carry these cargos along tracks of microtubules through the axon. I investigated the role of stathmin, a protein required for axonal transport that regulates microtubule dynamics. Loss of stathmin function in Drosophila results in axonal transport defects, altered neuronal excitability, and paralysis. In order to understand the function of stathmin in axonal transport, I created three transgenic strains of Drosophila, each carrying different inducible stathmin transgenes: a fluorescent-tagged stathmin, a dominant-negative mutant stathmin, and a wild-type stathmin. The results of my research with these transgenic strains will be presented.

Domestic Violence Within Low Socioeconomic Status Groups: The Role of Linguistic Sexism, Stereotypical Gender Roles, and Structural Marginalization

The present argument examines the socio-cultural factors that may facilitate domestic violence in low socio-economic status (SES) groups. Research is presented that demonstrates the affects of linguistic sexism on sexist beliefs and behavior. Additionally, it is shown that a desire to fulfill stereotypical
notions of masculinity can incite violent behavior toward women. A discussion of structural marginalization reveals that individuals from low SES backgrounds experience a reduced sense of personal power. It is therefore argued that discriminatory language, stereotypical gender roles, and diminished public power maintain a significant role in the occurrence of domestic violence in low SES populations.

**“Forward Out of Error, Forward into Light”: Hunger Striking, Force-Feeding, and Historiographical Oversight in Three Women's Suffrage Movements, 1909-1918**

From 1909 to 1918, women in Britain, Ireland, and the United States willingly starved themselves while in prison for suffrage activities, insisting that their governments treat them as political prisoners, not common criminals. Faced with potential martyrs, these governments chose to try and keep women alive through the torturous means of force-feeding rather than give into their demands. Strangely, few suffrage historians pay much attention to this hugely dramatic aspect of the movements. It seems that this oversight must arise not from a lack of poignancy, but rather from a profound discomfort around facing what was governmentally-condoned violence against women.

E. L. Kirchner’s Late Landscapes: Nationalism and Rebellion in Nazi Germany

Kirchner was one of the earliest progenitors of German Expressionist art in the early twentieth-century. His often ignored landscapes play an especially significant role during his later career, a time in which the National Socialist Party heavily ostracized him. I argue that Kirchner’s late landscapes are representative of an alternative German nationalism: His choice of landscape indexes earlier German artists who created what Kirchner felt to be expressions of true German art. By viewing his landscapes in this context, we see a dialogue develop between Kirchner and the political powers of the Third Reich and his rejection of the Nazi aesthetic.

Can Virtue Make Us Happy? The Art of Living and Morality
Ford 204, Session 3
Morality and Human Nature

Is happiness found through an external focus on accomplishing goals in the material world? Or is happiness fashioned through an internal focus on performing one’s duty according to the moral standards of one’s community (religious or secular)? Might happiness (eudaimonia) consist in taking personal responsibility for one’s creative capacity to accomplish things that nature cannot
accomplish on its own? Might viewing virtue in terms of the origins of one’s creativity rather than the external consequences of one’s actions lead to an understanding of virtue that allows us to be human and happy?

**The Importance of Intimacy: The Rehetoric of FGC in Kajiado, Kenya**

This project examines the discourse surrounding Female Genital Cutting (FGC) in the small town of Kajiado Kenya. Three types of anti-FGC arguments are analyzed for their values and limitations: medical arguments against FGC, women’s rights arguments and arguments which link FGC to education. Critically examining these different arguments next to one another both sheds light on the cultural intricacies of FGC and illustrates the way rhetorical frameworks impact social change movements. The research for this project was funded by the College Colloquium Summer Research Grant and was conducted in Kenya last summer.

Forest, Fish and Farm: Research at Willamette University’s Zena Forest  
Collins 105, Session 1  
**Fish Passage and Habitat Restoration: A Study of Fish Passage Barriers Along Spring Valley Creek**

Development within the Willamette Valley has impacted the availability and health of Oregon fish habitat along the Willamette River and its tributaries. Spring Valley Creek, which stretches from the Willamette-owned Zena Forest to the Willamette River, could act as vital habitat for these and other native fish populations. Similarly, the conservation easement under which Willamette University manages Zena requires maintenance of important fish and wildlife habitats. This study serves to identify possible barriers to fish migration along Spring Valley Creek in order to better direct habitat restoration efforts to improve fish passage. Four potential barriers have been identified thus far.

Nationalisms Examined  
Ford 301, Session 5  
**L’Hybridité narrée: Identity and Narrative Credibility in Marjane Satrapi’s Persepolis**

This project will explain the exploration of identity and its effects on narrative credibility as conceptualized in Marjane Satrapi’s Persepolis, the French autobiographical graphic novel. Persepolis illustrates Satrapi’s experiences of alienation while living in Austria and in her native Iran, each culture rejecting her on the basis of her experiences with the other. Her paradoxical position as an exile with intimate knowledge of the two cultures allows Satrapi to construct a narrative equally proud and disparaging of both countries, leading to an unbiased portrayal of the two that is worthy of the reader’s trust.

Collins 408, Session 1  
**Ted Bundy vs. Hannibal Lecter: An Exploration of Factual and Fictional Serial Murderers from the Mid-20th to Early-21st Centuries**

This study investigates the phenomenon of serial murder in the United States from the mid-twentieth century to the present-day. The first part of this research examines the biographical information of 10 convicted male serial murderers who committed their heinous crimes within the last 50 years. It is hypothesized that these men experienced similar plights during childhood and adolescence. The second part analyzes the depiction of fictional male serial murderers in 10 American films, from the classic Psycho to the
recent Untraceable. It is hypothesized that the portrayal of fictional serial murderers will differ from the temperament and behavior of actual serial murderers. The results of this study will be revealed and discussed.

Infrared Spectroscopy of Layered LixCoO2

Lithium-ion rechargeable batteries are common portable energy sources for laptops, cell phones, and related electronics. The most common cathode material found in Li-ion batteries is LiCoO2. During Li-ion battery discharge, the concentration of lithium present in the cathode fluctuates, causing changes in the crystal structure of LiCoO2. The purpose of this research is to examine the infrared spectra of LixCoO2 at various concentrations of lithium, x. Ultimately, the changes observed in the infrared spectra could be used to establish a simple method for determining the concentration of lithium present in spent or defective Li-ion battery cathode

Classical Figures as Symbols in Western Art Exemplified by Jacques-Louis David’s The Death of Socrates

Jacques-Louis David portrays Socrates as an admirable, moral man in his neo-classical painting entitled The Death of Socrates, created just two years prior to the French Revolution. Certainly, revolutionary figures during this period admired Socrates for his steadfast virtue in the face of injustice, yet the suggestion that Socrates was himself a revolutionary figure differs from Plato’s depiction of Socrates in the Apology. The discrepancy between David’s and Plato’s depiction of the same man demonstrates that classical figures become symbols with meanings that shift to align with the different values of different cultures over time.

Collins 210, Session 1  

The Emergence of a High African-American to White Unemployment Ratio During the Great Depression

“Although the ratio of nonwhite to white unemployment rates in the United States has approximated two to one for most of the postwar era, such large racial differences did not exist 60 to 100 years ago” (Vedder and Gallaway 1992). Where did this unemployment differential come from? What about the Great Depression led to the growth in unemployment inequity? By comparing unemployment rates from both the North and the South, I hope to find clues from the past to explain the early years and growth of the large unemployment ratio that has held into modern times.

**Presentations of Emperor Hirohito in Japanese War Museums**

Emperor Hirohito is a controversial figure in the narrative of World War II. Depictions of his role as monarch have ranged from deified leader of a militaristic nation to a tragically powerless figurehead. My research examines depictions of Emperor Hirohito in Japan today through the multi-media and multi-purpose mode of museum exhibits. The three Japanese war-related museums examined were selected for their variance in management and educational/memorial purpose. Their varying presentations of the emperor show that, while this topic may be marginalized in some war narratives for reasons of sensitivity, it is by no means dead.

**Three Aspects of Dasein’s Disclosedness in Heidegger’s Being and Time**

This paper analyzes the relationship between understanding, interpretation, and assertion as aspects of Dasein’s disclosedness in Martin Heidegger’s Being and Time. Heidegger argues that the philosophical tradition has misunderstood human experience by thinking of it in terms of a subject-object duality, and needs a new way of thinking about the meaning of being. Contrary to the Cartesian view that we can obtain knowledge about the world through detached reflection, I will agree with Heidegger’s view that we are completely immersed in the world and can never detach ourselves from the context that characterize our understanding of ourselves.

Life in the City
Ford 201, Session 5

**Improving Subjective Quality of Life for Individuals Diagnosed with Schizophrenia: Urban vs. Rural Environments**

Individuals diagnosed with schizophrenia have more opportunities to increase their subjective quality of life when residing in urban vs. rural areas. The factors that promote urban areas include resource availability and decreased social stigma towards mental illnesses. When self-perceived needs are met, quality of life is increased. Access to mental health resources is important in meeting identified needs and more resources are provided in urban vs. rural areas. Additionally, there is less stigmatization in urban areas because increased levels of diversity lead to more intergroup contact which decreases prejudice towards minorities. Reducing stigma is negatively associated with utilization of services.

Love and Romance in the Classics
Collins 105, Session 2

**Deception, Love, and Conquest in Ovid’s Amores**

Amores 1.5, one of only two poems in Augustan love poetry with a successful love scene, is often read as a simple love poem expressing the sensuality between lovers on a hot day. However, Ovid cleverly masks elements within the poem, such as duality, the theme of conquest, and allusions to famous, promiscuous women, which point to a more profound meaning of the poem. These elements highlight a deeper, subtler intention: to reveal the true nature of Ovid’s relationship with Corinna. To him, love is untouchable, something just out of reach, and this ephemeral quality is what makes it so desirable.

Teaching to a New Tune: Possibilities for Social Justice in Music Education

Over the last 2 years I have explored the emerging literatures of critical pedagogy and critical social theory with a particular focus on music education scholars. In pursuing social justice practice in music pedagogy as my senior thesis topic, I interviewed music educators identified as explicitly engaging with social justice in their teaching practices in order to identify some of their common practices, challenges and experiences. Ultimately I sought to identify several ways in which social justice, as theorized by music education scholars over the past few years, can inform music education practices.

Starr, Tyler
Molecular Approaches to Ecology Collins 105, Session 3
Hybridization in the Joshua Tree (Yucca brevifolia)

The Joshua tree (Yucca brevifolia), in association with the yucca moth, is a classic example of an obligate pollination mutualism; the Joshua tree relies on the yucca moth as its exclusive pollinator, while the yucca moth depends on the tree’s developing seeds as food for her larvae. There are two morphologically distinct Joshua tree varieties, each pollinated by a different yucca moth species. It is thought that these two tree varieties could be forming hybrids within a narrow contact zone. While vegetative morphological data is inconclusive, preliminary floral and genetic data suggest hybridization may be occurring.
Stefanik, David

Troubadours, Bards, and Philosophers: Love and Reason in the Middle Ages
Eaton 106, Session 4
**The Humanization of the Arthurian Court**

As a whole, this panel offers insight into the diversity of intellectual thought during the Middle Ages. From Boethius to the Romance of the Rose, and Maimonides to Marie de France, the intellectual thinkers of the time occupied themselves with ideas and themes as diverse as the ultimate good, true love, moderation, and sex. Through their works, often including scathing critiques, we can see the issues that were pertinent to society at the time, and even those themes that have permeated history and maintained their relevance to this day.

Stonebraker, Peter
Forest, Fish and Farm: Research at Willamette University’s Zena Forest
Collins 105, Session 1
**Zena Forest Rainwater Reclamation and Sustainability**

This paper investigates the potential for rainwater harvesting at Willamette University’s Zena Forest. Non potable uses for harvested rainwater include irrigation for farming, landscaping and washing equipment. To investigate rainwater harvesting, I have placed several long-term water gauges throughout the property to get a better understanding of Zena’s hydrology and water table to make sure that harvesting rain is feasible and cost effective. My results show that rainwater harvesting at Zena could produce 13,000 gallons of water per year. I propose that harvesting rainwater at Zena can help reduce the demand on publically shared water resources and will highlight the importance of water conservation in the 21st century.

Svenson, Kristen; Miller, Barratt; Kummert, Nicholas; Zane, Megan
Paradise Lost
Collins 201, Session 5
**A Transmutative Creation of Epic Genre**

John Milton wrote Paradise Lost with the intention of creating something “yet unattempted in prose or rhyme.” This paper argues that the poem’s genre, though intrinsically epic in the broadest sense of the term, is a mutation of previous epic tradition. By looking at the most
apparent instances of genre evolution in the text, and with an emphasis on the good that results and is created from the events of the poem, I will conclude that Paradise Lost cannot be considered in terms of classical or traditional genre, but as a transmutation of epic that focuses on life and redemption.

The “Intriguing Little Slut”: Pleasure in
Samuel Richardson’s Pamela

Samuel Richardson’s 1740 novel Pamela sparked a national furor and continues to cause critical debate to this day. The novel’s titular heroine has both been denounced as a slut and recommended from the pulpit as a paragon of virtue. I argue that this problem is usually polarized unhelpfully and misconceived and that the Pamela uses chastity and virtue to create pleasure in ways that would today be considered perverse, relying upon role-play, name-calling, the pleasurable exchange of power and threat of rape, and that this solves an enlightenment era problem in the conception of pleasure.

Collins 408, Session 1
Athletes and Alcohol Consumption

This paper examines the influence of athletics on activities related to alcohol consumption by college athletes. The research focuses on how alcohol consumption may vary based on certain factors such as whether or not the athlete is in season, the individual’s belief regarding alcohol, the team’s stance on alcohol, the competitiveness of the sport, and the success of the team. The participants were from Division III who participated in either a team sport or an individual sport and the information was obtained through semi structured interviews and surveys. There were 12 participants that volunteered to be interviewed and 50 participants that responded to the survey, which was available to all NCAA athletes. There were more instances of this behavior from athletes of team sport than athletes of individual sports especially if there are specific rituals or celebrations that involve alcohol. More findings will be discussed.

From Point A to Point B: Comparing Pathfinding Algorithms for Use in Videogames

The purpose of this project is to compare several common pathfinding algorithms used in modern videogames. The presentation includes an overview of modern pathfinding algorithms, as well as a short overview of pathfinding in the past. The presentation also includes an analytical comparison of these algorithms and an explanation of the bases on which they are compared, as well as a visual comparison of their effectiveness.

Multiple Meanings in Medieval Bodies

This paper will explore how bodies in the medieval world are understood fluidly in relation to religious thought and social pressures. Specifically, women’s bodies are experienced and lived multiplicatively as sites of divine connection and understandings of human power. The paper will draw on both primary texts written by medieval women as well as modern interpretations of this dynamic understanding of bodies.

**John VI Cantacuzenus and the Fall of the Byzantine Empire**

This study broadly examines statesmanship and foreign policy in the last 200 years of the Byzantine Empire, focusing specifically on the thirteen-year reign of John VI Cantacuzenus in the middle of the 14th century. Ironically, it was under Cantacuzenus, the late Empire's most brilliant statesman, that Byzantium's decline became fatal and irreversible. By analyzing Cantacuzenus' foreign policy and comparing imperial decision-making from the Fourth Crusade to John's resignation in 1354, this project provides insight into the complex world of medieval statesmanship while also illuminating Byzantium – one of the most scholastically neglected areas of European history.

**Mathematics, Particle Accelerators, and Chemotherapeutics: An Experimental and Computational Analysis of Anti-Cancer Compound KP1019**

Mathematics, particle accelerators, and chemotherapeutics? At first glance, these three subjects might appear to be unconnected. However, this research project integrated aspects of each topic in an attempt to better comprehend the chemistry of KP1019, an anti-cancer compound being prepared for clinical trials. We discuss both experimental data (collected at the Stanford Synchrotron Radiation Lightsource) and computational results (obtained at our own Willamette University) that contribute to the enhanced understanding of an important transport mechanism intermediate for this ruthenium-based anti-cancer agent.

“Lady Soul, You are so utterly formable to my nature”

How is sexuality and spirituality intertwined? How do medieval mystics invoke the language of courtly love to show how the relationship between individual and God is a language of reciprocity and exchange, of both pain and suffering, pleasure and love?

Session 4, Eaton 412

**Heavy Metal Accumulation in Bioswale Bed Materials in Salem, Oregon**

Urbanization, intensive automobile use, and the weathering of building materials create runoff with high concentrations of toxic heavy metals. Bioswales are used to prevent pollutants from contaminating urban waterways through bioretention, removal of toxics by plant absorption and infiltration through soil. The concentrations of heavy metals in the soil bed material of two bioswales in Salem, Oregon were analyzed to determine if such pollutants are accumulating over time. Higher concentrations of heavy metals were discovered in the soil at the points of inflow, suggesting that the ability of the vegetation to absorb metals is outpaced by deposition from polluted runoff.

**A Pilot Project for Stream Enhancement of a Reach of Shelton Ditch**

This research describes a design to enhance the stream and riparian functions of a reach of Shelton Ditch adjacent to Willamette University. The objectives of the study fall into three general categories: biological conditions, physical conditions and social value. In regard to the biological conditions, the goal is to enhance terrestrial and aquatic wildlife habitat by establishing greater connectivity within the stream corridor, controlling exotic and invasive species of flora and fauna, and increasing biodiversity. The physical goals are to mitigate issues of slope stability and erosion using soft-bank stabilization techniques such as native planting and erosion matting. The final objective is to develop a greater social value of Shelton Ditch by involving the Salem community in the implementation and monitoring of the proposed enhancement and creating an area where community members will find leisure and aesthetics. The results of the site analysis, design plan and other results will be discussed.

What’s in a Name?: The Rhetoric of ‘People of Color’ in Group Identity Formation

“People of Color” has fairly recently come into widespread usage in reference to historically marginalized racial groups in the United States. This presentation will provide a critical analysis of the positive aspects of the term as well as the potentially problematic aspects of its usage in naming and forming group identity through the case study of the “People of Color Group” on Willamette University’s campus. I consider both the need for such a group to exist as it does, as well as the ways in which the use of the term “People of Color” and the use of associated language within the space has shaped what the group has become and how it functions.

Satire and the Supernatural

This presentation will discuss the use of the super natural in medieval romance literature to critique the establishment of courtly love conventions. We will also discuss how medieval authors incorporate satire to comically hyperbolize and deconstruct notions of love in literature.

Effects of 2, 4-Dichlorophenoxyacetic Acid on Xenopus laevis and Mus Musculus Sperm Morphology

The effects of short-term 2, 4-dichlorophenoxyacetic acid (2, 4-D) exposure on frog and mouse sperm morphology will be used to further our understanding of the effects of herbicides on aquatic and mammalian populations. The study of the in vitro effects of 2, 4-D on frogs is important because amphibian sperm are exposed to the environment post-ejaculation to find and fertilize externally located eggs. Though mouse sperm remains internal, hormonal disruptions within the vaginal tract may produce similar effects to 2, 4-D on frog sperm. It is possible that 2, 4-D could affect sperm structure and/or function and impede fertilization.

My Summer Experience With Photovoltaics

This past summer I received the Fred Wert Sustainability grant to build a solar panel. During this time I researched solar cells to find the most efficient and high quality cells, bought the parts, and then created a 12.5-16 Volt, 3.5 amp solar panel. In this presentation, I will discuss the process of creating the solar panel and the research that I did to decide what solar panel to build. Also, I will be handing out blueprints and supply lists so that at the end of the presentation one can go home and build their own solar panel.

In Search of a Greener Revolution: The Origins of the Green Revolution and Sustainable Agricultures

An agricultural movement that began at the close of World War II, the Green Revolution increased global food production, changing social relationships and the environment. This study seeks to determine the Green Revolution’s the socio-economic and political causes, its local and global impact, and the requirements for a sustainable agriculture – one that benefits the community, individual, and environment. My conclusion that we must cultivate a Greener Revolution, placing social and environmental health before financial profit, is derived from my analysis of the academic literature, interviews with prominent thinkers such as Michael Pollan and Wes Jackson, and participant observation at commercial and research farms.

Gendered Explorations of Body, Self, and Sexuality in Medieval and Modern Texts

This paper will examine the ways men and women have explored and constructed the relationships between body, ‘self,’ and sexuality and in doing so, created the body as a site of meaning. It will draw upon primary texts and contemporary scholars to examine how our relations to our bodies have changed or remained constant throughout history.

Collins 205, Session 4
The Landless Workers Movement (MST) and Counter-Hegemony: Strategies of the Struggle for Agrarian Land Reform

MST, the largest and perhaps most dynamic social movement in Latin America, works to redistribute agricultural land to poor farmers in response to the gross inequality of land ownership in Brazil. What are the strategies that make such a movement successful? I suggest that through their practices of land occupation and settlements, leadership structure, education, and cultural production the MST helps create a Counter-Hegemonic identity and culture for the rural workers of Brazil. This identity provides the strength, cohesion, and continuity of the movement. The MST therefore demonstrates the importance of creating Counter-Hegemonic discourses within movements, while also speaking to the limits of this strategy in the face of non-democratic tendencies and neo-liberal policies of the Brazilian state.

A Tale of Two Socks

Filmmaking as an art form utilizes many components to elicit an emotional response from the audience. In this short film we follow the journey of a lost sock, using soundtrack and filming style in an attempt to personify an inanimate object. It is our intention to suggest that even a short abstract film can have an engaging story, and leave the audience feeling differently than they did before they saw it.

An Indirect Defense of the Nobility of Remus Lupin

Stories of lycantrphy and werewolves have existed in the Western imagination for centuries. In modern times, there have been marked changes in the way we as a culture view monsters, and werewolves in particular. The rise in popularity of works like J.K. Rowling’s Harry Potter series and series like it necessitate a working knowledge of the literary evolution of werewolves from killing machines to relatable antiheroes. This presentation will discuss Bisclavret, a 12th century text written by Marie de France, in which the werewolf makes marked and specific strides away from the stuff of nightmares into the realm of young adult literature.

Duck and Cover: A Short Film

Duck and Cover Modern Racism is not the “Jim Crow” racism of yesteryear. Instead what we must confront as a society is institutional racism. This parody public service announcement attempts to bring institutional racism examples to the front of the discussion in hopes of shedding light on a racism that has gone long undetected by white society. The film is broken up into four shorts, and the unifying theme is: “Silence is Betrayal.” The intended message is that by remaining silent, society has turned a blind eye to a racism that involves every day life.

Insulin Resistance in Adolescent Fructose-fed Rats

The average daily consumption of added fructose in the United States has increased significantly. Elevated intake of fructose is correlated with
detrimental health effects, notably hyperglycemia and insulin resistance in the periphery. A high-fructose diet also causes insulin resistance in the brain. The cellular mechanism of insulin resistance is thought to affect insulin receptors, which would inhibit spatial learning and memory. This project investigated the effects of a high-fructose diet in rats to determine if they would develop insulin resistance. A protocol was also developed for measuring brain insulin receptor phosphorylation levels. The results will be revealed and discussed.

The Emancipation of Woman to Worker: A Translation of Chinese Newspaper Editorials from 1959-1966

This translation project illuminates the Chinese Party's official representation of women during the Great Leap Forward and Socialist Education Movement. The study examines eight editorials published on International Women's Day by the Party's People's Daily newspaper, between 1959 and 1966. It reveals that women were re-imagined as economic capital, emancipated from the repressive household through the guidance of the Party and the red flag of Mao Zedong thought. The translations show that while women made great gains under the Communist Party, they were represented in a limited fashion and one that best served the Party's interests, not necessarily theirs.

Examining the Gap: Evaluating the Dispute Between Bertrand Russell and P. F. Strawson

In this paper, I explicate the dispute surrounding reference and meaning in Philosophy of Language between Bertrand Russell and Peter F. Strawson. Strawson, in his objection to Russell's Theory of Descriptions (ToD), points to the convention and context surrounding a proposition as important aspects of language not included in the ToD and advocates for a truth value gap. He believes this objection undermines the ToD's strict reliance on reference. Russell in his own reply to Strawson claims that his theory accommodates Strawson's objections. I ultimately defend Strawson's objections and reject Russell's reply.

To Boldly Go: Reading Paradise Lost as an Ideology

In Paradise Lost, Milton attempts to "justify the ways of God to men." In doing so, he perpetuates an ideology that condemns rebellion against God. However, Milton's portrayal of Satan and Eve leaves the reader torn between submission to God and sympathy with these fallen characters. Thus, their rebellions point to a faultline in God's authority. The term "faultline" is taken from Alan Sinfield's theory of Cultural Materialism which explains the structure of power in society as manifested in texts. This theory reveals a space for Milton to voice dissident potential without directly undermining the pretense of justifying God.
Acknowledgements

The Tenth Annual Student Scholarship Recognition Day is brought to you by the SSRD committee with the support of the Office of the Dean of the College of Liberal Arts.

The following individuals and groups deserve a special Thank-You for their assistance in making the Tenth annual Student Scholarship Recognition Day possible:

2009-2010 SSRD Committee
Michael Lockard, Assistant Professor of Exercise Science, SSRD Chair
Jason Duncan, Assistant Professor of Biology
Joyce Millen, Associate Professor of Anthropology
Aili Zheng, Assistant Professor of German
Valerie Watson, Administrative Assistant
Mary Wulzen, Student Representative
Jenny Warren, Student Representative
